

API AUTOMATION

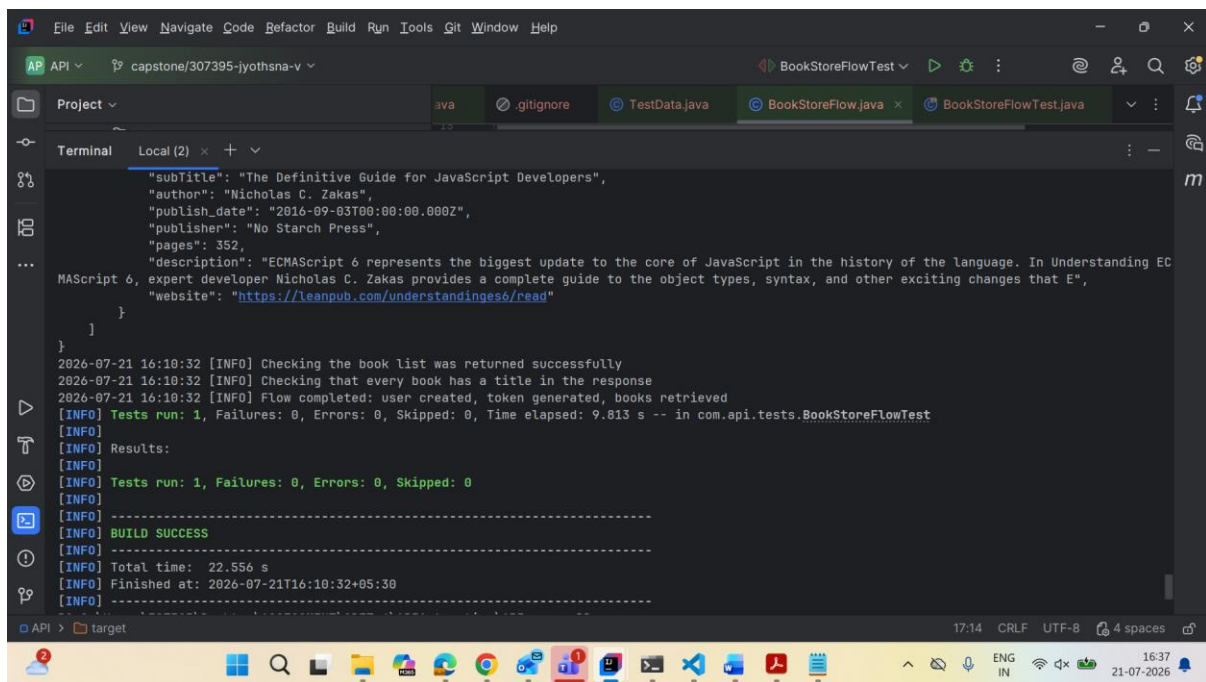

Framework:

The Scenario:

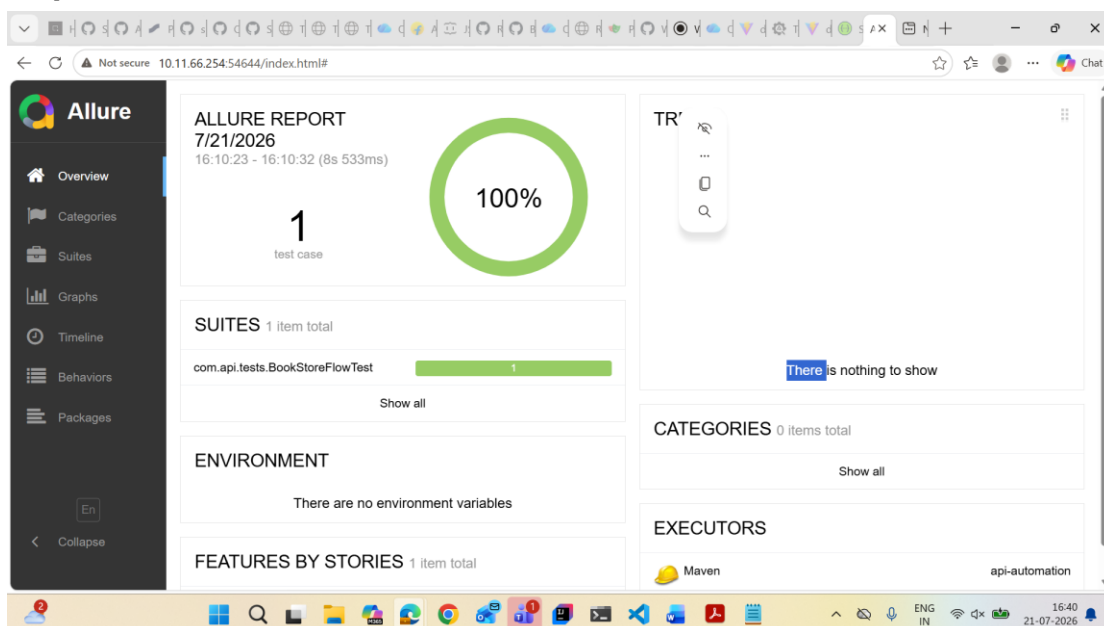

- Create a user — send a username and password to the API and get back a new user account.
- Generate a token — use that same username and password to log in and receive an authentication token .
- Get the list of books — use that token to fetch the book list from the store, proving the token actually works and unlocks access.

Running evidence in the terminal:

```
File Edit View Navigate Code Refactor Build Run Tools Git Window Help
API capstone/307395-joythnsa-v BookStoreFlowTest
Project java .gitignore TestData.java BookStoreFlow.java BookStoreFlowTest.java

Reports :

CI pipeline:

The image displays two screenshots of a GitHub Actions CI pipeline run for 'API Automation #14'. The top screenshot shows the initial steps of the pipeline, while the bottom screenshot shows the final steps.

Top Screenshot:

- Summary:** The 'api-tests' job is highlighted as successful.
- Annotations:** 1 warning is noted.
- api-tests job details:** The job succeeded 1 minute ago in 49s. The steps listed are:
 - Set up job (1s)
 - Checkout code (1s)
 - Set up Java (0s)
 - Cache Maven dependencies (1s)
 - Run API tests (25s)
 - Generate Allure report (15s)
 - Upload API Allure report (1s)

Bottom Screenshot:

- Summary:** The 'api-tests' job is highlighted as successful.
- api-tests job details:** The job succeeded 1 minute ago in 49s. The steps listed are:
 - Checkout code (1s)
 - Set up Java (0s)
 - Cache Maven dependencies (1s)
 - Run API tests (25s)
 - Generate Allure report (15s)
 - Upload API Allure report (1s)
 - Upload API logs (0s)
 - Post Cache Maven dependencies (2s)
 - Post Set up Java (0s)
 - Post Checkout code (1s)
 - Complete job (0s)
