

Name : Tetali Hemanth Venkata Reddy

Empid : 299167

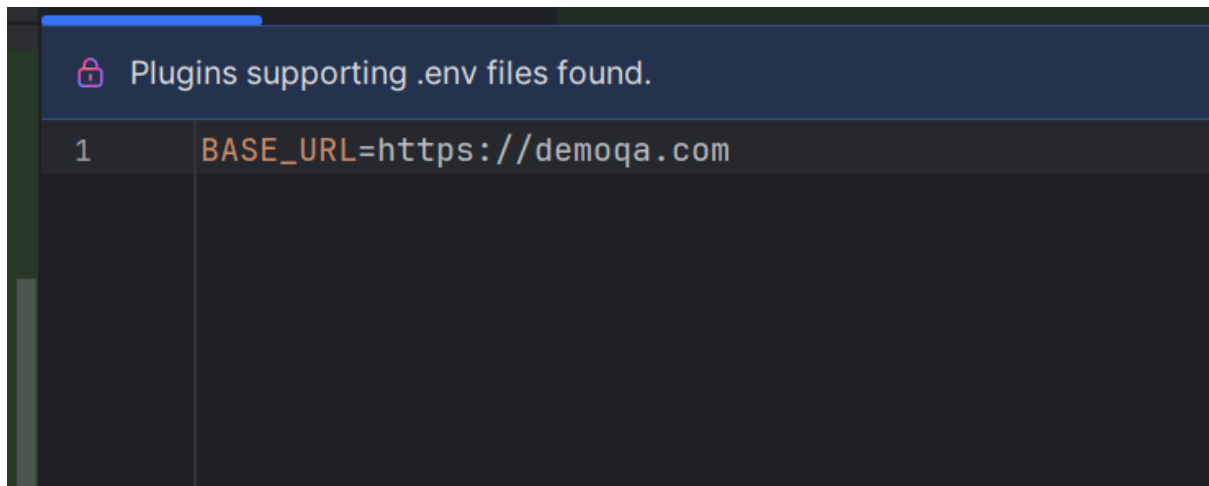

Github-link : [RajaVUst/SDET-4 at capstone/299167-hemanth](https://github.com/RajaVUst/SDET-4-at-capstone/299167-hemanth)

Frameworks I used in the following project

The above was the framework which I have used in the following project

I created .env file which contains baseurl

Then I imported .env to ApiConfig

Then I imported the ApiConfig to Basetest .

Then I extended the basetest to the test file which I have created.

Now I will say which file contains which things

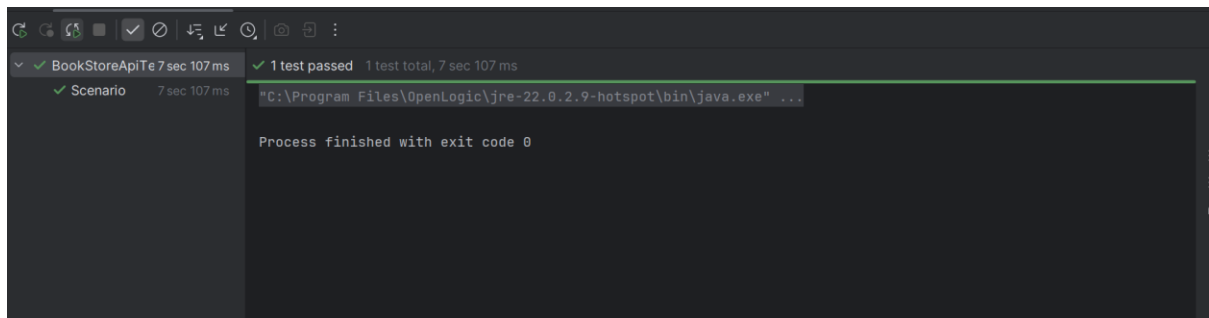

EndPoints file contains all the endpoints to createUser, GenerateToken, Get_Books

Specfactory contains Request and Response Specifications

The files which contains in models is for junit assertions

I also created allure-reports in the following project since I don't have allurecli installed in my local machine I am unable to view the following files in the local machine but I can review files by running the following files in github cli.

Now I will paste the screenshots for the things which I have done now

To run the test using terminal we need to use the following command

mvn clean test

```
PS C:\Users\299167\Desktop\New folder\SDET-4\API_Final> mvn clean test

```

The above was the screenshot for the output.

I also push into my own repo since the collaboration repo don't have access to read-write on branches to get the allure-reports
