

Name : Tetali Hemanth Venkata Reddy

empld : 299167

GitHub_Link : [RajaVUst/SDET-4 at capstone/299167-hemanth](https://github.com/RajaVUst/SDET-4-at-capstone/299167-hemanth)

Framework I have used

I have created pages for every page then I have separated every page locators as a separate file as shown in the above framework

Then i imported all the pages to flows in which I mentioned complete flow and the free shipment flow in the flows

Then I imported flows to fixtures then I imported fixtures to test file as shown in the above file

And also I have added logs while running the test

```
logger.ts 13 logger
1 import winston from "winston";
2
3 export const logger = winston.createLogger({
4   level: "info",
5
6   format: winston.format.combine(
7     winston.format.timestamp({
8       format: "YYYY-MM-DD HH:mm:ss"
9     }),
10    winston.format.printf(({ timestamp, level, message }) => {
11      return `[${timestamp}] ${level.toUpperCase()}: ${message}`;
12    })
13  ),
14
15  transports: [
16    new winston.transports.Console()
17  ]
18 });
```

For logs I imported Winston in the above and created logger.ts file which is used for logs

I imported that file to flows to use logs

Also if the test case fails we can get the evidence which I have mention in the playwright config.ts

```

TS playwright.config.ts > [🔍] default > 📁 projects > 📁 use
1  import { defineConfig, devices } from "@playwright/test";
2  import { Environment } from "../config/Environment";
3
4
5  export default defineConfig({
6    testDir: "./tests",
7    timeout: 30_000,
8    fullyParallel: true,
9    workers: process.env.CI ? 4 : undefined,
10   retries: process.env.CI ? 2 : 0,
11   reporter: [
12     ["list"],
13     ["html"]
14   ],
15   use: {
16     baseURL: Environment.BASE_URL,
17     trace: "on-first-retry",
18     screenshot: "only-on-failure",
19     video: "retain-on-failure",
20     actionTimeout: 10_000,
21     navigationTimeout: 30_000
22   },
23   projects: [
24     {
25       name: "chromium",
26       use: {
27         ...devices["Desktop Chrome"]
28       }
29     }
30   ]
31 });

```

I kept base url in the .env file and then I imported it to environment.ts which then kept in playwright.config.ts as shown in the below screenshot

```

config > TS Environment.ts > [🔍] Environment > 📁 BASE_URL
1  import dotenv from "dotenv";
2  dotenv.config();
3  export const Environment = {
4    BASE_URL: process.env.BASE_URL!
5  };

```

```

],
  use: {
    baseURL: Environment.BASE_URL,
    trace: "on-first-retry",
    screenshot: "only-on-failure",
    video: "retain-on-failure",
    actionTimeout: 10_000,
    navigationTimeout: 30_000
  },
  projects: [
    {
      name: "chromium",

```

The Screen shots of my testcases:

```

C:\Users\299167\Desktop\hemanth_final_assessment\UI_Final>npx playwright test scenarios.spec.ts
◇ injected env (1) from .env // tip:  📖  multiple files { path: ['.env.local', '.env'] }

Running 2 tests using 2 workers

◇ injected env (0) from .env // tip:  🔒  encrypted .env [www.dotenvx.com]
◇ injected env (0) from .env // tip:  📖  multiple files { path: ['.env.local', '.env'] }
